P/N CNR FT II AB

CNR FT II AB - DYNAMOMETRE

Categories: Testing, measurement and maintenance tools, benches

PRODUCT DESCRIPTION

Detecting friction points caused by brinelling of bearings.

The force gauge CNRFT II AB is a tool specifically designed to manually measure the force required to pull on a bearing. It can help detecting faulty bearings if they are to easy or too hard to pull or if there is a hard spot during test. The CNR FT II AB automatically calculates the average force during test, save the curve and measure the maximum and minimum force.

Designed to be used on the field, it is the right tool for maintenance on bearings.

Contents :

The force gauge is delivered with a force gauge, a hook, a power supply & an USB-C cable. Certificate of calibration with measurement data in both directions included.

TECHNICAL INFORMATION

Technical specifications

Capacity : 25 daN / 56 lbf
Resolution : 0.1 daN / 0.1 lbf
Accuracy : +/- 0.25% of full scale
Battey life : 15 hours
Units : daN, Lb
Sensor sampling rate : 2,000 Hz
Curve sampling rate : 100 Hz
Weight : 730 g
