KIT AERO

P/N BR-B160-02-C

SPLITTABLE TOW BAR H160

Catégories : Tow bars, Towing, mooring and immobilization tools

PRODUCT DESCRIPTION

The Tow-Bar is a rigid stowage device that attaches to the nose gear and tractor to move the helicopter from point A to point B.
The peculiarity of this version is that it can be disassembled into two overlapping parts to obtain a compact set.
This removable Tow-Bar configuration allows it to be transported in the cargo compartment

Installation feasible by an operator on flat ground and with good weather conditions. 2 operators are needed for an installation in bad weather or inclined ground. The 2nd operator should be used to guide the operator installing the bar.

Additional spare parts FUSE-SET-160 (kit of 10 torsions and 10 tractions) can be purchased if necessary.

TECHNICAL INFORMATION

Applicabilité	H160
Caractéristiques principales	– Maximum load in traction : 1720 daN – Maximum load during turn : 1865 Nm
ATA	09-20
